

CE 0425

R140C

Descrizione

The Giacomini R140C safety valves series are used in solar thermal systems using or glycol solutions (max. 50 %), with closed expansion tank, in order to guarantee that the pressure of the fluid of the circuits does not exceed the project limits. In compliance with Directive "PED" 2014/68/UE, cat. IV.

Versions and product code

Series	Product code	Connections	Pressure [bar]
R140C	R140CY006	G 1/2"F x G 3/4"F	4 (green cap)
	R140CY009		6 (yellow cap)

CONFORMITY DECLARATION

Frame the QR code with your smartphone or tablet to view the conformity declaration.

Technical data

- Fluids: water and glycol solutions (max. 50 %)
- Temperature range: 5÷160 °C
-20÷160 °C only with glycol solutions 50 %
- Nominal pressure: 10 bar
- Opening overpressure: 20 %
- Closure range 20 %
- PED cat.: IV

Materials

- Body: brass UNI EN 12165 CW617N
- Membrane: EPDM
- Separator: brass UNI EN 12164 CW614N
- Rod: brass UNI EN 12164 CW614N
- Gasket: synthetic fibre
- Spring: steel
- Spring presser: brass UNI EN 12164 CW614N
- Bonnet: IXEF
- Knob: POM
- Cap: ABS or MABS

Installation

Before installing any safety valve, it is necessary that the specialist technical personnel in charge of the system carries out the corrected sizing, in accordance with the local codes.

The R140C safety valves series must be mounted in vertical positions, in order to avoid the deposit of the impurities contained in the system, and in line with the sense of flow indicated from the arrow on the body. The safety valves, moreover, must be installed in the coldest part of the system (corresponding to the solar manifolds delivery, as showed in figure), clearly visible and easy controllable. The connecting pipework of the safety valve must be a maximum of 1 m long, without any restriction, and its diameter not lower than the one of the inlet connection. The discharge of the safety valve must be clearly visible and carried in pipework with diameter not lower than one of the outlet connection.

Warning.

In order to avoid situations of danger for property and/or individuals, during the installation, commissioning and maintenance of the safety valves, it is important to respect all the technique norms and the indications contained in the present document.

Maintenance

The inspection of the valve must be carried out at least once per year, increasing the pressure of the system until the discharge. If this were not possible, the handle can be turned and the discharge controlled at sight. The eventual impurities formed on the seat can be removed by means of periodic cleaning.

Prestations

Product code	Connections	Orifice diameter [mm]	Net cross section [mm ²]	Outflow coefficient K	Calibration pressure [bar]	Nominal discharge press. [bar]	Closing pressure [bar]	Drainage capacity [kg/h]	Max. generator potential [kW]	Max. generator potential [kcal/h]
R140CY006	G 1/2"F x G 3/4"F	13	132,665	0,318	4	4,8	3,2	141,16	81,9	70396
R140CY009					6	7,2	4,8	172,88	100,3	86217

Data calculated in accordance with UNI EN ISO 4126-1. Maximum generator power calculated as the product of the drainage capacity multiplied by the fluid vaporisation heat, at ambient pressure W = 1,013 bar

Dimensions

Series	Product code	Connections	Dimensions (A x B x C) [mm]	Relief funnel
R140C	R140CY006	G 1/2"F x G 3/4"F	53 x 76 x 37	R141Y014 R141CY004
	R140CY009			

Accessories

It should channel the discharge of safety valves using the appropriate funnels exhaust R141, R141C (to be ordered separately).

Relief funnel R141	Relief funnel R141C	For safety valve with drainage of:
		
R141Y014	R141CY004	3/4"

Note.
The use of the R141, R141C relief funnels (plus curved couplings R19 and R189 if necessary) prevents any spray from reaching the electric components.
